

## **GeoCove Announces Partnership with GEO-VISUS to offer I<sup>2</sup>C in a SaaS Model.**

Orlando, FL (August 6, 2009)

GeoCove, Inc., is pleased to announce a partnership with Geo-Visus Inc., one of the leading providers of Hosted GIS Solutions (SaaS). Geo-Visus will offer GeoCove's I<sup>2</sup>C in a SaaS Model as part of their Hosted GIS Solutions.

"By partnering with GeoCove Inc., we bring a much needed solution to a wider range of customers. By providing our clients with cost-effective solutions via a SaaS model, we effectively integrate GIS into their day to day operations and strengthen our position in the GIS Industry" commented Martin Copping, VP Operations for Geo-Visus Inc.

GeoCove's premier product line I<sup>2</sup>C, offers simple to use field applications for collecting and mapping damage assessment and human services information with an option for real-time transmission to your GIS server, crucial to accurate and timely response and recovery efforts after a catastrophic event. The I<sup>2</sup>C product also includes built in reporting and mapping tools from the web, essential for emergency management officials to have a current common operational picture (COP). The partnership with Geo-Visus will allow government agencies not previously able to run the I<sup>2</sup>C Enterprise software, due to ESRI software licensing, the ability to use it in a simple to access hosted model. By accessing the I<sup>2</sup>C application in this hosted environment, the customer does not need to have ArcGIS Server running in-house.

"Our most successful partnerships are with like-minded firms that are dedicated to exceptional client service, and are able to use specific domain knowledge in applying I<sup>2</sup>C in a new SaaS Model. We are confident that our partnership with Geo-Visus will be very successful" commented Karyn Tareen, GeoCove's President.

### **About Geo-Visus Inc**

Headquartered in Plantation, Florida, Geo-Visus Inc. specializes in Hosted GIS Solutions (SaaS) and GIS Management Services. They lead the way in ArcGIS Server Hosting; On-Site and Remote, Installation, Monitoring and Management.
